

OrthoView™ V6

New from OrthoView

faster, more features and
a fresh new interface

- Plan a total hip in 60 seconds or less with SmartHip

Automated stem placement saves time and the one-click reduction feature enables leg length correction to be visualized on-screen

- Simplify your workflow with ImageShare

Integrated with your OrthoView software, ImageShare provides secure transfer of images and plans over the internet for increased workflow control

- Instant planning tips and prompts with SmartHelp

Instant tips and prompts to guide you through the planning process

ImageShare - Collaborating over the Internet

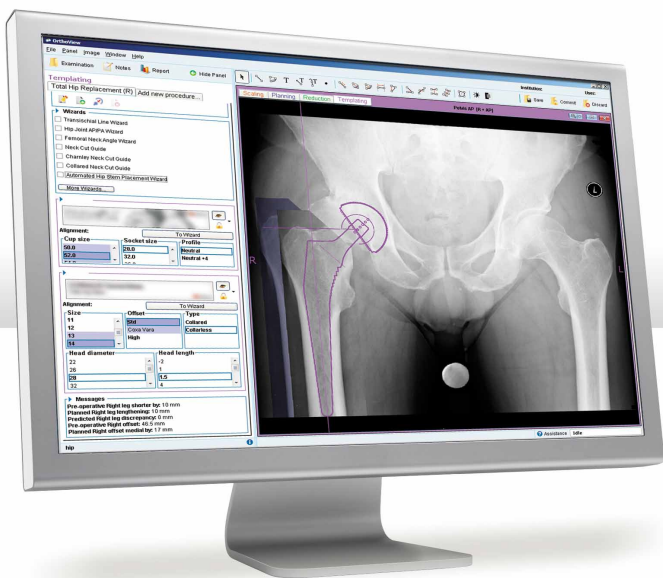

ImageShare - Improving Workflow in the Office

OrthoView™

Orthopaedic Digital Planning

OrthoView™ V6

faster, more features and a fresh new interface

More about OrthoView

OrthoView partners with the major PACS providers to offer an integrated, web-deployed or stand alone digital templating solution for Orthopaedics, to suit your needs.

Streamline the planning process

OrthoView incorporates QuickScale to calibrate the digital image with one click, enabling prosthesis size selection and measurements in a scaled environment. Specialist wizards and toolsets are designed to make the planning process quicker and easier.

An easy to use planning tool

OrthoView is quick to learn and easy to use. An experienced orthopaedic surgeon will quickly be able to create detailed plans for joint replacement, trauma, pediatrics, osteotomy or spinal assessment.

For more details on the new features and the benefits of digital planning with OrthoView call 1-800-318-0923 or email sales@orthoview.com
